

AP 10588

**AMENDMENTS TO THE SPECIFICATION**

All page numbers and line numbers refer to the clean copy of the substitute specification.

Please, amend the paragraph starting in line 20 on page 7, as follows:

A low-noise operation of the transmission is achieved, in accordance with the invention, through the division of the ~~sun~~ planetary wheels (12/13) into a plastic part (18) and a metal part (19).

Please, amend the paragraph extending from line 24 on page 8 to line 2 on page 9 as follows:

The geometry of the coupling (30) applied to the transmission casing ~~(14)~~ (17) makes possible the application of a locking unit which, in the event of an error, blocks the ~~transmission casing (10/14)~~ sun wheel (14), in a power-free manner, from rotating and prevents a superimposed steering engagement.

Please, amend the paragraph starting in line 4 on page 10 as follows:

The planetary wheels for the planetary transmission depicted in Figure 2 are depicted in Figure 7. Thus, identical elements are also provided with the same reference numbers. Here, the division of the ~~sun~~ planetary wheels (12/13) into a plastic part (18) and a metal part (19), where the planetary wheels (12/13) and the metal part (19) are connected with one another in a form-locking and force-locking manner, can be noted in further detail.
